North Ridge Highway Intersection Upgrade

# G101 · Overall plan

## DESIGN NOTES

The preliminary design speed is 100 km/h. The north industrial access connects at chainage 0+300 on the rural undivided provincial corridor. No south access leg is proposed.

The existing 12.0 m paved surface retains two 3.5 m painted through lanes and two 2.5 m shoulders in this issue. The 3.5 m dimensions refer to through lanes, not auxiliary turn lanes.

## DESIGN NOTES

The concept provides a north access throat and a 3.5 m auxiliary turn-lane allowance. Final turn-lane storage and taper lengths require the accepted traffic assessment and road-authority review.

Through-lane paint allocation remains 3.5 m on each side. No approved departure from the rural undivided highway lane-width guidance is recorded.

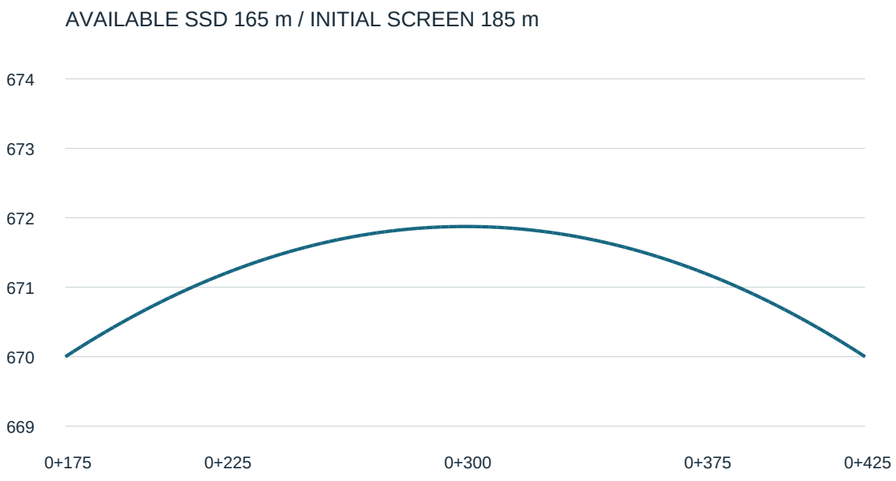
North Ridge Highway Intersection Upgrade

# G201 · Longitudinal profile

## DESIGN NOTES

Available eastbound stopping sight distance at the crest is 165 m for the preliminary 100 km/h design speed. The owner screening value is 185 m; grade effects and final design criteria remain to be assessed.

BVC 0+175 elevation 670.000 m; EVC 0+425 elevation 670.000 m; curve length 250 m; grades +3.0% and -3.0%. Road crest 0+300 elevation 671.875 m. No approved design exception is included.



L = 250 m  g1 = +3.0%  g2 = -3.0%  K = 41.67 m/%
